

Problems for Lecture 1

1.

A combination of three nonzero vectors in \mathbb{R}^4 is the zero vector

$$\begin{bmatrix} 1 \\ 2 \\ 1 \\ 0 \end{bmatrix} + \begin{bmatrix} 1 \\ 1 \\ 2 \\ 1 \end{bmatrix} - \begin{bmatrix} 2 \\ 3 \\ 3 \\ 1 \end{bmatrix} = \mathbf{0}$$

Form $A\mathbf{x} = \mathbf{0}$

$$\begin{bmatrix} 1 & 1 & 2 \\ 2 & 1 & 3 \\ 1 & 2 & 3 \\ 0 & 1 & 3 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \\ -1 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

4. We can easily find $x = [1, -1, 0]^T, y = [0, 1, -1]^T, z = x + y$

9. $m = 3, n \geq 3, r = 3$

18.

$$\begin{bmatrix} 1 \\ 1 \\ \dots \end{bmatrix} [0 \quad \dots \quad R]$$
